PARCEL POST RATES

On Seeds, Plants, Bulbs, Roots, Books, Tools, etc., within the U. S. and Possessions.

	<i>First Pound or Fraction</i>	<i>Each Additional Pound or Fraction up to and in- cluding 10 lbs.</i>
Local	10c.	1.0c
First and Second Zone within 150 miles of either.....	12c.	2.1c
Third Zone within 150 to 300 miles	13c.	3.0c
Fourth Zone within 300 to 600 miles	14c.	4.5c
Fifth Zone within 600 to 1000 miles.....	15c.	6.0c
Sixth Zone within 1000 to 1400 miles	16c.	7.5c
Seventh Zone within 1400 to 1800 miles.....	17c.	9.5c
Eighth Zone all over 1800 miles.....	18c.	11.5c

NOTE—A fraction of a cent in the total amount of postage on any parcel shall be counted as a full cent. Limit of weight for delivery to all zones 70 pounds; to Canada 15 lbs. If weight exceeds this, we will pack in 2 or 3 parcels (not more) provided money is remitted to cover postage. (Mark your Zone Number on order.)

All parcels under 8 ounces are carried everywhere regardless of zone rates at two cents for 2 ounces or fraction thereof, plus one cent for each additional ounce or fraction thereof up to 8 ounces. Above 8 ounces take parcel post rates.

Low Prices.—A matter of primary importance in buying seeds is to obtain only the best. Our position enables us to supply you with such seeds, and at prices to compete with all reliable seedsmen.

Good Order.—If seeds are not received in good order within a reasonable time, write us and we will look up the shipment. Small orders are often delayed in transit.

Cash.—Money must always accompany the order. Money may be sent safely either by Postoffice Order, Express Order, or Bank Draft. We will be responsible for the safe receipt of remittances sent by either of the above methods. We accept postage stamps the same as cash.

WARRANTY AND QUALITY OF SEEDS

While we exercise the greatest care to have all our seeds Pure, Reliable, and True to Name, we do not give any warranty, express or implied, as to description, quality, and productiveness, or any other matter, of any seeds we send out, and we will not be in any way responsible for the crop. If the purchaser does not accept the seeds on these terms, they are at once to be returned and the money that has been paid for same will be refunded.

Tomato		3 to 4 ft.	3 ft.	100 to 120 days	May to June
Turnip	⅛ in.	2 ft.	4 in.	60 to 80 days	April to Aug.
Watermelon	½ in.	6 ft.	4 to 6 ft.	3 to 4 mos.	

The time required for crops to reach edible size varies, of course, according to the seasons and varieties. Different soils also have a profound influence. A tomato, for instance, which in Southern New Jersey will mature in 90 days, may require from 100 to 110 days in sections further north having heavy clay soils. Allowance also must be made for the relative estimate of the yields, due to climatic and soil conditions. But the averages will be found to be fairly accurate on the basis of many years of observations.

ASPARAGUS.

An ounce of seed will sow 50 feet of drill, and produce about 300 plants.
Fair crops may be expected the third year from seed.

	Oz.	¼ lb.	Lb.
Washington, Mary20	.50	1.50
The highest type of the rust-resistant asparagus. It is earlier, larger and longer than the original Washington and quite as resistant. Tips are very tight and do not "sprangle out" or "blow" prematurely.			

BEANS.—Dwarf or Bush.

Postage on all Beans to be paid by purchaser. See Parcel Post Rates
Front Page.

Beans should not be planted before the ground becomes light and warm, in favorable seasons usually about the first of May. The soil should be rich and mellow, and the seeds scattered about 3 inches apart in drills that are to 2 to 2½ feet apart, and covered about 2 inches deep. Successive sowings, made at intervals of about two weeks until the middle of July, will give a plentiful supply of beans throughout the season. One pound of seed will sow 100 feet of drill.

	Lb.	¼ Bu.	Days
German Black Wax, Yellow Pod50	6.00	55
Improved Golden Wax, Yellow Pod50	6.00	51

POLE BEANS.

Less hardy than the Bush Beans, and should be planted several weeks later, when the ground is warmer. Plant the seeds in slightly raised hills 3 or 4 feet apart, 4 or 5 seeds to the hill. The Limas are especially tender, and the rule for late outside planting with them is rigid. Painstaking cultivators, who are usually the most successful, plant them eye downward, after setting stout poles for every hill. All sorts of late-ripening Pole Beans are benefitted by pinching the tips of the vines back when they are about 5 feet high. A pound will plant about 100 hills.

BEETS.

The soil best suited to the Beet is a deep, light and rich loam. For very early crops, the seed is sown in hotbeds, and the seedlings are transplanted to the open ground. For main crop, the seed is sown outside as soon as the soil is in good condition, in drills from 12 to 15 inches apart, and covered about an inch deep; the plants are thinned to stand 4 or 5 inches apart in the rows. For winter crops, sow seeds in June, in drills, as for early Beets. An ounce of seed will sow 100 feet of drill; five or six pounds will sow an acre.

	Oz.	¼ lb.	Lb.	Days
Asgrow Wonder, (New Dark Red) round deep red root.....	.25	.50	1.50	57

BROCCOLI.

	Oz.	4 Oz.
Italian Green Sprouting50	1.50

A distinct variety, extensively cultivated by Italian gardeners. Plant forms a large, solid head which remains green. When the central head is cut, numerous sprouts develop from the leaf axes, each sprout terminating in small green heads, which are bunched for market.

BRUSSELS SPROUTS.

	Oz.	4 Oz.
Half-Dwarf Improved50	1.50

Species of Cabbage; cultivation the same.

ASK FOR QUANTITY PRICES

CABBAGE.

Seed sown in hotbed or greenhouse about February 15 will give plants large enough to transplant into hotbeds about March 10. Set them 2 or 3 inches apart each way, and as soon as they become well established remove the glass for part of the day, to harden them for final transplanting into the open ground, increasing the exposure daily until April 10 or 20, when the final transplanting may be made. Plants for this early crop need not stand further apart than 1½x2 feet. For late crops, sow seeds in April or May, and transplant to the open ground when large enough, setting the plants up to the first leaf, and 2x3 feet apart. It is important that the plants should not stand thick in the seedbeds, as this would induce weak, slender plants.

One oz. to 1500 plants; 2 oz. to the acre.

	Oz.	Days
All Head Early, early flat head50	78
All Seasons, medium early round head. Yellow-resistant.....	.50	87

Surehead, late flat head50	77
Wisconsin Hollander, early round head. Yellow-resistant.....	.50	105

CARROT.

Carrots succeed best on heavy loam, which preferably should have been well fertilized the previous year, as fresh manure often causes the roots to grow pronged and misshapen. Sow the seed as early in the spring as the ground can be prepared, firming the soil down over them.

One ounce of seed will sow 200 feet of drill: 2 pounds will sow an acre.

	Oz.	¼ lb.	Lb.	Days
Chantenay Half Long (The Model)25	.75	2.00	72
Excellent medium early half-long stump rooted variety; roots about 6 inches long, very thick, smooth and of a deep orange-red color.				
Danver's Half Long25	.75	2.00	72
Good for all purposes.				
Long Orange25	.75	2.00	88
Large; good for stock also.				
Nantes Improved Coreless25	.75	2.00	70
Reddish orange, blunt end root.				
Oxhart25	.75	2.00	72
Roots short and very thick.				

CAULIFLOWER.

Culture for Cauliflower and cabbages is essentially the same, but to the former extra care given in applying fertilizers and moisture well repays the gardener. Sow the seeds for early and late crops as directed for cabbage, but do not set the early plants in the open field too soon, for if too much stunted by severe frosts they begin to form heads before they are strong enough to develop them well. Plants which have not headed before winter sets in may be stored in a cool cellar or coldframe, and will form heads there without any further attention.

One oz. to 1500 plants; 2 oz. to the acre.

	Pkt.	¼ Oz.	½ Oz.
Early Snowball, Dwarf10	.75	1.00

CELERIAC.

Sow in early spring; transplant the seedlings in May. They will be ready for cooking in October and may be preserved in dry sand for use during winter.

	Oz.
Turnip Rooted Celery, used for celery flavor in soups.....	.50

ALL PRICES SUBJECT TO CHANGE WITHOUT NOTICE

CELERY.

Celery can be grown on any garden soil, but is finest on deep, mellow bottom land. Seed for early crops should be sown in hotbeds about March 15. The plants may either be thinned to give them room to grow, or transplanted to another bed to grow until it is time to plant them in the open ground. For main crop, seed should be sown in the open air as soon as the soil and air are warm enough. They should be covered lightly, or merely pressed into the earth with a board if the soil is fine and mellow. The seedbed must be kept free from weeds and well watered in dry weather. When the plants are large enough, transplant them to shallow trenches or furrows from 4 to 6 feet apart, according to the variety grown, setting the plants 6 inches apart in the rows and pressing the soil firmly around them. One oz. to 10,000 plants.

	Oz.
Celery Cabbage or Chinese Lettuce.	
Wong Bok, short variety50
Chihili, tall variety50
Giant Pascal, green garden variety50

White Wonder, white, large, clustered25	.75	2.50	60

EGG PLANT.

Sow the seed in hotbeds early in March, transplant to small pots and plunge them in the same beds; this is to make them strong and stocky. They should not be planted out until May or June, when the weather becomes warm and settled, as cool nights and wet weather will check their growth. Set the plants in rows 3 feet apart each way and give them thorough cultivation, drawing the earth up to the stems when they are about a foot high. Repeated sowings are sometimes necessary, as the seed does not germinate freely without strong and uniform heat. One oz. to 2,000 plants.

	Oz.	Days
Black Beauty50	80
New York Improved Spineless50	83

ENDIVE.

This is an important fall and winter salad. For early, the seed should be sown in April, in drills 15 inches apart, and the seedlings thinned to stand 12 inches apart in the rows. Sowings for the main crop may be made in June and July, as the vegetable is used principally in fall and winter. The inner leaves are blanched by tying the tips of the outer ones together, or by laying boards over the plants.
One-fourth oz. to 100 feet of drill.

	Oz.	¼ lb.	Days
Broad Leaf Batavian25	.75	92

KOHL RABI.

Very palatable when prepared for the table like turnips. If the weather is favorable the seed should be sown in April, in rows 18 inches apart, and the seedlings thinned to stand a foot apart. One-half oz. to 100 feet of drill.

	Oz.	Days
Early Purple Vienna50	62
Early White Vienna50	55

ALL PRICES SUBJECT TO CHANGE WITHOUT NOTICE

LEEK.

Used for seasoning soups and boiling with meats. The seed should be sown in hotbeds in early spring, and the seedlings transplanted later to the open ground, 8 inches apart, in rows from 12 to 15 inches apart. One-half oz. to 100 feet of drill.

Broad Scotch or London Flag Oz. .50

LETTUCE.

Seed for the first outdoor crop is usually sown in hotbeds in February, and the seedlings transplanted to the garden in April, 8 to 12 inches apart, in rows 12 inches apart. For a succession until frost, sow in drills in the open ground at intervals of every two or three weeks, and thin the plants to stand 6 to 8 inches apart. For plants to force in hotbeds from November until spring, sow seed in hotbeds in the fall, and cover up as winter approaches, until the plants are required for use. Or the seed may be sown in hotbeds early in winter and the seedlings transplanted when large enough into fine and well-prepared garden soil. One-fourth oz. to 100 feet of drill; 2 pounds to the acre.

	Oz.	¼ lb.	Lb.	Days

Oak Leaf25	1.00	4.00	85

MUSHROOM SPAWN.

American Pure Culture Spawn 1 lb. Brick .50

MUSKMELON.

Muskmelon seed should not be planted outdoors until the ground has become warm and dry. The hills should be about 6 feet apart, and carefully prepared. Rich earth is far better for the young plants than manure; but if the latter must be used see that it is well rotted. Plant from six to twelve seeds in a hill, and when the young seedlings are strong enough to resist the attacks of insects, thin them, leaving three of the strongest in each hill. One oz. to 50 hills: 1 to 2 pounds per acre.

OKRA.

The tender young pods are used for seasoning soups and stews. Sow the seeds thickly in rich soil about the middle of May, in drills 3 feet apart, and cover the seeds an inch deep. Two oz. to 100 feet of drill.

	Oz.	¼ lb.	Days
Dwarf Green, deep green pods10	.25	50
Perkin's Mammoth Green, deep green pods, tall10	.25	56
White Velvet, white pods, early10	.25	60

ONION.

Onions thrive best on a rich, deep, loamy soil. For sets, the seeds should be sown very thickly in drills as early as possible in spring. In summer, as soon as the tops die down, harvest the bulbs and store them in a dry, cool place, spreading them in thin layers. Early in the following spring replant them 4 inches apart, in small drills 12 inches apart, and they will form into fine, large bulbs early in the season. Large Onions may also be grown from seed the first season if the land is strong and well manured, the seed sown thinly in drills a foot apart, and the seedlings thinned to stand 3 or 4 inches apart in drills; they must be well cultivated and kept free from weeds. Five pounds per acre will be required for large onions; for sets, 25 to 30 pounds.

One-half oz. to 100 feet of drill.

	Oz.	¼ lb.	Lb.	Days

PARSLEY.

Much used for garnishing and flavoring soups, stews, etc. The seed is slow to germinate, and should be sown as early as possible, in drills 12 inches apart, thinning plants in rows 4 to 6 inches apart. One-half oz. to 100 feet of drill.

	Oz.	Days
Green Curled25	85
Moss Curled. Finely cut and curled for garnishing.....	.25	70
Plain, for flavoring25	72

PARSNIP.

Sow the seed in drills 15 inches apart as early as possible in spring, and thin the plants until they are 5 or 6 inches apart in the rows. The roots are much improved by frost; to be dug up as required. On the approach of cold weather, cover them heavily with manure or litter. Deep, rich, heavy soil is best suited to the culture of Parsnips, and the roots will be smooth and large if no fresh manure is used, as this tends to make them coarse-grained and misshapen. One-half oz. to 50 feet of drill; 8 pounds to the acre.

	Oz.	¼ lb.	Lb.	Days
Large Hollow Crown Sugar25	.50	1.00	95

PEAS.

Postage to be Paid by Purchaser. See Parcel Post Rates on Front Page.

Peas succeed in light, dry, loamy soil. Early and dwarf sorts require richer soil than the late varieties. If manure is used let it be old and well rotted, or there will be a rank growth of vines with few pods. Sow the early, smooth, round sorts as early in spring as the ground can be worked. Seeds of wrinkled varieties are more liable to rot if the ground is cold and must be planted later. Sow all the varieties quite early and depend for succession upon the different times of ripening of the various sorts, or from the first sowing sow every two weeks until June for a succession. One-half pound to 100 feet; 2 bushels to the acre.

White Rice, medium eared, 10-16 rowed40	90

PUMPKIN.

Grown principally for stock-feeding, yet some are so sweet, juicy and fine-grained that they will always be considered indispensable for pies and sauces. The vines require the same culture as that recommended for melons, but the seeds must be planted in hills much wider apart; frequently they are planted among corn. A pound of seed will plant from 200 to 300 hills. One to two pounds to the acre.

	Oz.	¼ lb.	Lb.	Days
Cushaw, Golden15	.50	1.50	112

RHUBARB.

Sow the seed early, and when the plants are large enough thin them to 4 or 5 inches apart. The next spring or fall transplant them 3 feet apart each way in deep, rich soil. For forcing, take up some large roots and place them in a dark corner of the cellar or greenhouse. Two oz. to 100 feet of drill.

	Oz.	¼ lb.
Victoria25	.75

SALSIFY, OR OYSTER PLANT.

When cooked, the roots have something of the flavor and odor of oysters. They may be boiled, used in soups, or grated and fried as fritters. Culture the same as for parsnips and carrots. Roots are perfectly hardy, and may be left in the ground all winter. A quantity of roots for winter use may be stored in a pit or in sand or damp earth in a cellar. One oz. to 100 feet of drill.

	Oz.	¼ lb.
mammoth Sandwich Island50	1.25

ALL PRICES SUBJECT TO CHANGE WITHOUT NOTICE

SPINACH.

One of the most important crops grown for greens, and may be had in good condition from very early in the spring until cold weather. For early use sow very early in spring, and for succession at intervals. The main crop for spring and winter use should be sown in September and the plants covered for winter.

One-half oz. to 100 feet of drill: 6 to 8 pounds to the acre.

	Oz.	¼ lb.	Lb.	Days

TOBACCO

Sow the seed in plant bed in March. Transplant when five or six leaves appear. Set in rows 3½ feet apart, 18 to 20 inches apart in the row, according to variety. When the bud appears, break off the top, leaving 16 leaves to mature. Keep off all suckers growing from the stem. When the leaves have become waxy and brittle it is ripe. Cut and hang the stock in a shed to dry.

TOMATO.

As the plants advance in growth support them by brushwood. To have the Tomato very early it is necessary to start the plants in a hotbed, or they may be reared in a flower pot in a window and subsequently transplanted. Plants for an early crop should be raised under glass. For intermediate crop they may be raised on outside beds. For late crops the seed may be planted in permanent position.

One oz. to 2,500 plants; 2 ozs. to the acre.

	Oz.	¼ lb.	Days

Yellow Pear Fruit 2 inches long, pear formed for preserves.	.75	3.00	73

TURNIP.

For early, sow as soon as the ground can be prepared, in drills 15 inches apart, and thin the plants to stand 8 inches apart. Sow for succession at intervals of two weeks until the last week in July, and from that time onward until the last of August sow for main crop. The sowings should always be made just before a rain, if possible, as the success of the crop depends, in a great measure, upon quick germination and rapid growth of the young plants. One oz. to 300 feet of drill; 1 pound to the acre.

WATERMELON.

Secure good strong vines early in the season by making the hills large, mellow and well drained, with the manure placed so that they will not dry out quickly under hot suns. All possible protection from insects should be given the young plants, and as protection from insects, use dry ashes or coal dust sprinkled over the leaves. Plant the seeds thickly, and thin the plants to four of the strongest in each hill.

One oz. to 50 feet of drill; 1 to 2 pounds to the acre.

NEW IN VEGETABLES**Burpee Hybrid Cucumber No. 370**

This is a new white spine, slicing type, with large fruit of rich dark green, 8 inches long, 2½ inches wide, with blunt ends and small seed cavity. The crisp white flesh is of good quality and delicious flavor. Ready for use in 60 days.

Burpee Hybrid Tomato No. 1132

Fruits are medium to large, firm, thick walled, globular shape and scarlet to red in color. Flesh is meaty and rich flavored. Average weight, 8 ounces. An early mid-season hybrid producing 20% more than popular varieties. Ready in 70 days.

Fordhook Hybrid Tomato No. 1121

Fordhook is an early prolific hybrid noted for its smooth medium size fruits of even red color. Averages 6 ounces in weight, is oblate to globular in shape, mildly acid and sweet in flavor. Bears profusely through entire season. Ready in 60 days.

Clinton Hybrid Tomato No. 680

Fruits are round, slightly flattened at the top and bottom, and possess an excellent red skin and flesh color. Average weight, 8 ounces. It has large dark green plants, with dense foliage, and is in season with Marglobe and Rutgers. Ready in 75 days.

Giant Tree Tomato

This is a smooth round dark red tomato of amazing vigor with plants 10 feet high. Fruits are firm and non-acid flavored, solid, with small seed cavity. Average weight, 1 to 1½ pounds. It has potato leaves and is sometimes called Italian Potato Leaved.

Jubilee Tomato No. 1111

Orange skinned, orange fleshed, Jubilee compares favorably with the best of the red varieties in shape, smoothness, quality and solidity. Fruits are large, globular, thick walled, with few seeds. Ready in 72 days.

MICA-GRO OR VERMICULITE**Wonder Aid For Gardens**

Improves Soil Texture—Grows Stronger Seedlings—Mulches Plants Safely—Roots Cuttings Faster—Makes Bulb Forcing Easier—Protects Stored Bulbs—Cannot Rot—Absorbs Eight Times Its Weight In Water—Can Be Dried and Re-Used.

50c per ½ peck or 1½ lb. 16 qts. or 4 lbs. \$1.25 \$3.50 per ½ bushel.

FLAT-PAK PLANT FORCER — PORTABLE HOT-BED

Stainless Steel — Non-Corrosive — Chemical Resistant — Weather Proof — Adjustable, Plastic Window — Grooved for Sun Lamp Cords — Lasts a Lifetime—\$15.95
